

Products

Magnum Machining manufactures products for a variety of industries and specializes in CNC Machining of castings made from gray iron, ductile iron, all types of steel, aluminum and brass. With the goal of always being the best in the class, we strive to take the customer product from prototype to production with mid to high volume programs.

Magnum is fully integrated in:
 Computer Aided Design (CAD) - based on Master CAD®
 Computer Aided Engineering (CAE)
 Computer Aided Manufacturing (CAM) - based on Master CAM®
 We have the expertise to take a customer's project from concept through design to full production status quickly and efficiently.

Each of our contract services are custom designed to meet the unique specifications and delivery requirements of our customers. Magnum managers have more than 200 years combined experience in designing, engineering and manufacturing.
